TECHNICAL SKILLS

FULLSTACK & LANGUAGES

TypeScript · Python · Next.js · React · NestJS · FastAPI · Pydantic · Java 8/11/17/21

BACKEND & ARCHITECTURE

Spring Boot · Spring Cloud · Microservices · EDA · CQRS · RESTful APIs · API Gateway · Design Pattern · DDD · Hexagonal

MESSAGING & STREAMING

Apache Kafka · Rabbitmq

DATA & PERSISTENCE

PostgreSQL · MySQL · Oracle · MongoDB · DynamoDB · Elasticsearch · Redis · Query Optimization

CLOUD & DEVOPS

GitHub Actions · AWS (EC2, S3, RDS, Lambda, ...) · Docker · CI/CD · Jenkins · GitLab CI

OBSERVABILITY & RELIABILITY

ELK Stack · Prometheus · Grafana · OpenTelemetry · Jaeger and Zipkin · Circuit Breaker · Resilience4j

PROFESSIONAL SUMMARY

Senior software engineer with **7 years of experience** delivering web applications and distributed systems across **healthcare, pharmaceutical logistics, and fintech**. Fullstack skill set spanning TypeScript, Python, Next.js, React, and NestJS, backed by deep Java/Spring Boot expertise. Experienced in REST API integration, PostgreSQL optimization, event-driven payment processing, LLM integration, and AWS deployment. Owns complex modules end-to-end and collaborates with international clients and cross-functional teams.

PROFESSIONAL EXPERIENCE

Java Backend Developer

Oct 2021 – Present

FPT Software · Hanoi, Vietnam

ZLP – Pharmaceutical Warehouse Tracking System

A web application for a leading pharmaceutical healthcare provider in Asia, enabling warehouse staff to monitor item status, scan and link packs to cartons/pallets, track movement history, and relocate items across warehouse locations.

Stack: Next.js · Python · FastAPI · Pydantic · Java 17 · Spring Boot · Kafka · PostgreSQL · MongoDB · Auth0 · AWS

- Architected and delivered backend microservices for real-time package tracking across multi-warehouse pharmaceutical supply chains.
- Designed and documented REST APIs processing high-frequency warehouse scanning events, reducing downstream processing latency.
- Optimized complex database queries across PostgreSQL and MongoDB, significantly improving item lookup and inventory reporting speed.
- Led sprint planning, feature breakdown, and effort estimation for a cross-functional development team.
- Developed Python/FastAPI endpoints for warehouse status summaries and LLM-assisted operational insights, using Pydantic for request and response validation.

Parkway O2 – Healthcare Insurance Claim Processing Platform

Built for Asia's largest private healthcare group, O2R connects clinics with patients and manages end-to-end insurance workflows — from claim creation and verification through adjudication to payment settlement.

Stack: Java 17 · Spring Boot 3 · Oracle · Angular · AWS

- Maintained and enhanced backend services governing the full patient claim lifecycle — submission, verification, adjudication, and payment.
- Optimized critical API endpoints handling large insurance claim datasets, improving throughput and response times under peak load.
- Improved system stability by refactoring legacy service layers and eliminating recurring production issues.

Digital Payment Gateway Platform

A high-throughput payment gateway serving financial institutions, handling online payment authorization, real-time transaction processing, and end-of-day reconciliation at scale.

Stack: Java 17 · Spring Boot · Python · Kafka · PostgreSQL · Redis · Docker · AWS

- Designed and implemented APIs for payment authorization, settlement, and transaction reconciliation serving financial institutions.
- Built an event-driven transaction processing pipeline using Apache Kafka, enabling reliable asynchronous settlement at scale.

SECURITY

OAuth2 · JWT · Keycloak · IDP: Okta / Auth0

TESTING & QUALITY

JUnit · Mockito · API Testing · Sonarqube

WEB & INTEGRATIONS

LLM Integration · Payment Integration · WebSocket · API Integration

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
  2024
- EnglishScore British Council – 459
  2024
- Mendix Rapid Developer
  2024
- HSK Level 3 – Chinese Proficiency
  2025

- Engineered idempotent payment processing logic to guarantee exactly-once transaction consistency and prevent duplicate charges.
- Developed Python scripts to reconcile transaction records in PostgreSQL, identify settlement discrepancies, and generate operational reports.
- Tuned database queries and Redis caching strategies to sustain performance under high-volume concurrent transaction loads.

Java Web Developer

Jan 2019 – Sep 2021

CMC Global · Hanoi, Vietnam

ZAC – NFT Game Asset Management Platform

Developed for a Hong Kong-based blockchain gaming company, ZAC is a backend platform allowing players to manage in-game accounts, items, gift codes, and NFT assets across multiple game titles.

Stack: NestJS · Java · Spring Boot · Kafka · PostgreSQL · MongoDB · Elasticsearch · Redis · AWS

- Developed backend APIs enabling players to manage digital game assets and account data on a blockchain-integrated platform.
- Optimized API performance and Elasticsearch indexing strategies to handle high concurrency from a large global player base.
- Acted as a key liaison between the engineering team and international clients to clarify business requirements and deliver on time.

MRBS – Enterprise Meeting Room Booking System

An internal web application enabling company staff to reserve meeting rooms, manage office devices and assets, and view real-time room availability across multiple floors and locations.

Stack: React · WebSocket · Java · Spring Boot · MySQL

- Designed normalized database schema and full backend architecture from scratch for a corporate resource scheduling platform.
- Implemented real-time room availability updates via WebSocket, eliminating double-booking conflicts across office locations.

Payment Middleware Integration Service

A middleware layer bridging mobile applications with multiple third-party payment providers, ensuring secure transaction routing, error handling, and consistent payment processing across channels.

Stack: NestJS · Java · Spring Boot · Oracle · Redis

- Implemented secure payment request processing APIs integrating mobile applications with multiple external payment providers.
- Diagnosed and resolved critical production transaction failures, restoring service reliability and minimizing financial risk.
- Conducted systematic peer code reviews to enforce engineering standards and reduce defect rates.

EDUCATION

Engineer's Degree

2019 – 2022

Automotive Technology

University of Transport and Communications, Hanoi
