SENIOR JAVA BACKEND DEVELOPER

DANG ANH VAN

Hanoi, Vietnam · (+84) 373-273-121 · davan.1802@gmail.com · github.com/vanpersieyolo

SUMMARY

Senior Java Backend Developer with over 5 years of experience designing and delivering scalable distributed systems across healthcare, pharmaceutical logistics, and fintech domains. Experienced in event-driven architecture, cloud deployment, and performance optimization. Proven ability to own complex modules end-to-end, lead feature development, and mentor junior engineers. Seeking a senior or technical lead role to drive architecture decisions and deliver robust backend systems at scale.

TECHNICAL EXPERTISE

Java Backend Development —

Spring Boot, REST APIs,Monolithic, Microservices, CQRS, Serverless,...

Event-Driven & Distributed Systems - *Kafka, Redis,...*

Database Management — *Oracle, PostgreSQL, MongoDB, Redis, Elasticsearch,...*

Cloud-Native Development — *AWS, Docker, Jenkins,...*

Secure API Development — *OAuth2, JWT, IDP: Okta, Auth0, Keycloak, ...*

EXPERIENCE

OCTOBER 2021 – PRESENT

Java Developer | FPT Software | Hanoi, Vietnam

ZLP – Warehouse Tracking System

A logistics system used by a pharmaceutical company to track packages across warehouses.

Technologies: Java 17, Spring Boot, Kafka, PostgreSQL, MongoDB, Auth0, AWS, Next.js

- Developed backend services for warehouse inventory tracking
- Designed REST APIs to process warehouse scanning events
- Optimized database queries for faster item tracking
- Led task breakdown and estimation for new features

Parkway O2 – Healthcare Claim Processing Platform

A healthcare insurance platform managing patient claims, claim verification, adjudication, and payment processing.

Technologies: Java 17, Spring Boot 3, Oracle, Angular, AWS

- Maintained backend services for insurance claim workflows
- Optimized API performance for large claim datasets
- Improved system stability and backend maintainability

Digital Payment Gateway Platform

A high-throughput payment gateway used by financial institutions to process online payments and transaction reconciliation.

Technologies: Java 17, Spring Boot, Kafka, PostgreSQL, Redis, Docker, AWS

- Designed APIs for payment authorization and settlement
- Implemented event-driven transaction processing using Kafka
- Built idempotent payment processing to ensure transaction consistency
- Optimized database queries supporting high-volume transactions

JANUARY 2019 – SEPTEMBER 2021

Java Web Developer | CMC Global | Hanoi, Vietnam

ZAC – NFT Game Asset Management Platform

Backend platform enabling players to manage game assets and accounts.

Technologies: Java, Spring Boot, NestJS, Kafka, PostgreSQL, MongoDB, Elasticsearch, Redis, AWS

- Developed backend APIs for asset management
- Optimized API performance for high concurrent usage
- Collaborated with clients to clarify requirements

MRBS – Meeting Room Booking System

Corporate system used internally to manage meeting rooms and devices.

Technologies: Java, Spring Boot, ReactJS, MySQL, WebSocket

- Designed database schema and backend architecture
- Implemented APIs supporting meeting scheduling
- Developed real-time updates using WebSocket

Payment Middleware System

Middleware service integrating mobile apps with external payment providers.

Technologies: Java, Spring Boot, NestJS, Oracle, Redis

- Implemented payment request processing APIs
- Diagnosed and resolved production transaction issues
- Conducted peer code reviews

EDUCATION

2017 – 2021

Engineer's Degree — Information Technology

University of Transport and Communications, Hanoi

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate (2024)
- EnglishScore British Council – 459 (2024)
- Mendix Rapid Developer (2024)
- HSK Level 3 – Chinese Proficiency (2025)
